

Active Governance

Governance that acts at the point of use.

Turn governance metadata, policy and context into behavior that participates when governed data products are created, published and consumed.

FROM PASSIVE DOCUMENTATION TO ACTIVE EXECUTION

Traditional governance records intent. Active Governance carries that intent into the lifecycle of a data product, so appropriate controls and evidence remain connected to how the product is used.

PASSIVE GOVERNANCE

- Policies stored separately
- Documentation describes intent
- Controls depend on manual handoffs

ACTIVE GOVERNANCE

- Policy participates in use
- Context stays with the product
- Evidence supports accountability

WHAT TRAVELS WITH A GOVERNED DATA PRODUCT

Business meaning

Ownership

Quality

Lineage

Policy

Governance should not stop at documentation.

It should participate wherever trusted data is created and used.
